Installing KNIME Analytics Platform

1. Go to the [download page](#) on the KNIME.com website to start installing KNIME Analytics Platform.
2. The download page shows three tabs which can be opened individually:
 - *Register for Help and Updates*: here you can optionally provide some personal information and sign up to our mailing list to receive the latest KNIME news
 - *Download KNIME*: this is where you can download the software
 - *Getting Started*: this tab gives you information and links about what you can do after you have installed KNIME Analytics Platform
3. Now open the *Download KNIME* tab and click the installation option that fits your operating system. KNIME Analytics Platform can be installed on Windows, Linux, or macOS.

Notes on the different options for Windows:

- The Windows installer extracts the compressed installation folder, adds an icon to your desktop, and suggests suitable memory settings.
- The self-extracting archive simply creates a folder containing the KNIME installation files. You don't need any software to manage archiving.
- The zip archive can be downloaded, saved, and extracted in your preferred location on a system to which you have full access rights.

Windows		
KNIME Analytics Platform for Windows (installer)	64 Bit	(441.03 MB)
<i>The installer adds an icon to the desktop and suggests suitable memory settings</i>	32 Bit	(437.42 MB)
KNIME Analytics Platform for Windows (self-extracting archive)	64 Bit	(444.58 MB)
<i>The self-extracting archive only creates a folder holding the KNIME installation</i>	32 Bit	(441.15 MB)
KNIME Analytics Platform for Windows (zip archive)	64 Bit	(529.54 MB)
	32 Bit	(525.59 MB)

Linux		
KNIME Analytics Platform for Linux	64 Bit	(554.2 MB)

Mac		
KNIME Analytics Platform for Mac OSX (10.11 and above)	64 Bit	(522.98 MB)

Figure 1. KNIME Analytics Platform available installers

4. Read and accept the privacy policy and terms and conditions. Then click *Download*.
5. Once downloaded, proceed with installing KNIME Analytics Platform:
 - *Windows*: Run the downloaded installer or self-extracting archive. If you have chosen to download the zip archive instead, unpack it to a location of your choice. Run `knime.exe` to start KNIME Analytics Platform.
 - *Linux*: Extract the downloaded tarball to a location of your choice. Run the `knime` executable to start KNIME Analytics Platform.
 - *Mac*: Double click the downloaded dmg file and wait for the verification to finish. Then move the KNIME icon to *Applications*. Double click the KNIME icon in the list of applications to launch KNIME Analytics Platform.

The following operating systems versions are supported:

- Windows
 - Windows 10, 11
 - Windows Server - 2016, 2019, 2022,
- Ubuntu 20.04 LTS and 22.04 LTS and derivatives
- RHEL/CentOS/Rocky Linux 8, 9
- macOS (12 and above - macOS x86_64 Intel) and M1 (macOS arm64 - Apple silicon) (only the last two major versions are supported)
 - macOS 12: Monterey
 - macOS 13: Ventura

Also check the [KNIME Getting Started Guide](#) and the [KNIME Analytics Platform User Guide](#).

Configuration settings and `knime.ini` file

When installing KNIME Analytics Platform, configuration settings are set to their defaults, and they can later be changed in the `knime.ini` file. The configuration settings, i.e. options used by the Java Virtual Machine when KNIME Analytics Platform is launched, range from memory settings to system properties required by some extensions.

You can find `knime.ini` in the installation folder of KNIME Analytics Platform.

On MacOS: To locate `knime.ini` on MacOS, open Finder and navigate to your installed Applications. Next, right click the KNIME application, select *Show Package Contents* in the menu, and navigate to `Contents` → `Eclipse`.

The `knime.ini` file can be edited with any plaintext editor, such as Notepad (Windows), TextEdit (MacOS) or gedit (Linux).

Allocating memory in `knime.ini` file

The entry `-Xmx1024m` in the `knime.ini` file specifies how much memory KNIME Analytics Platform is allowed to use. The setting for this value will depend on how much memory is available in your machine. KNIME recommends setting it to approximately one half of your available memory, but you can modify the value based on your needs. For example, if your computer has 16 GB of memory, you might set the entry to `-Xmx8192m`.

Installing Extensions and Integrations

If you want to add capabilities to KNIME Analytics Platform, you can install extensions and integrations. The available extensions range from free open source extensions and integrations provided by KNIME to free extensions contributed by the community and commercial extensions including novel technology nodes provided by our partners.

The KNIME extensions and integrations developed and maintained by KNIME contain deep learning algorithms provided by Keras, high performance machine learning provided by H2O, big data processing provided by Apache Spark, and scripting provided by Python and R, just to mention a few.

Install extensions from:

- **KNIME Hub:**
 - Search for the Extension or Integration you want to install in the search bar
 - Click Extensions on the results page
 - Click the extension you want to install, and from the extension page and drag and drop the squared yellow icon, shown in [Figure 2](#), to the KNIME Analytics Platform. A window will open asking if you want to search and install the extension or integration. Click Yes and follow the instructions.

Figure 2. Install the KNIME Integrated Deployment Extension from KNIME Hub

- Restart KNIME Analytics Platform.
- **KNIME Analytics Platform:**
 - Access the info page by clicking the info icon in the top right corner of the KNIME Analytics Platform.
 - Under **Resources** scroll down to **Install Extensions** and click the *Install Extensions* button. The dialog shown in [Figure 3](#) opens.

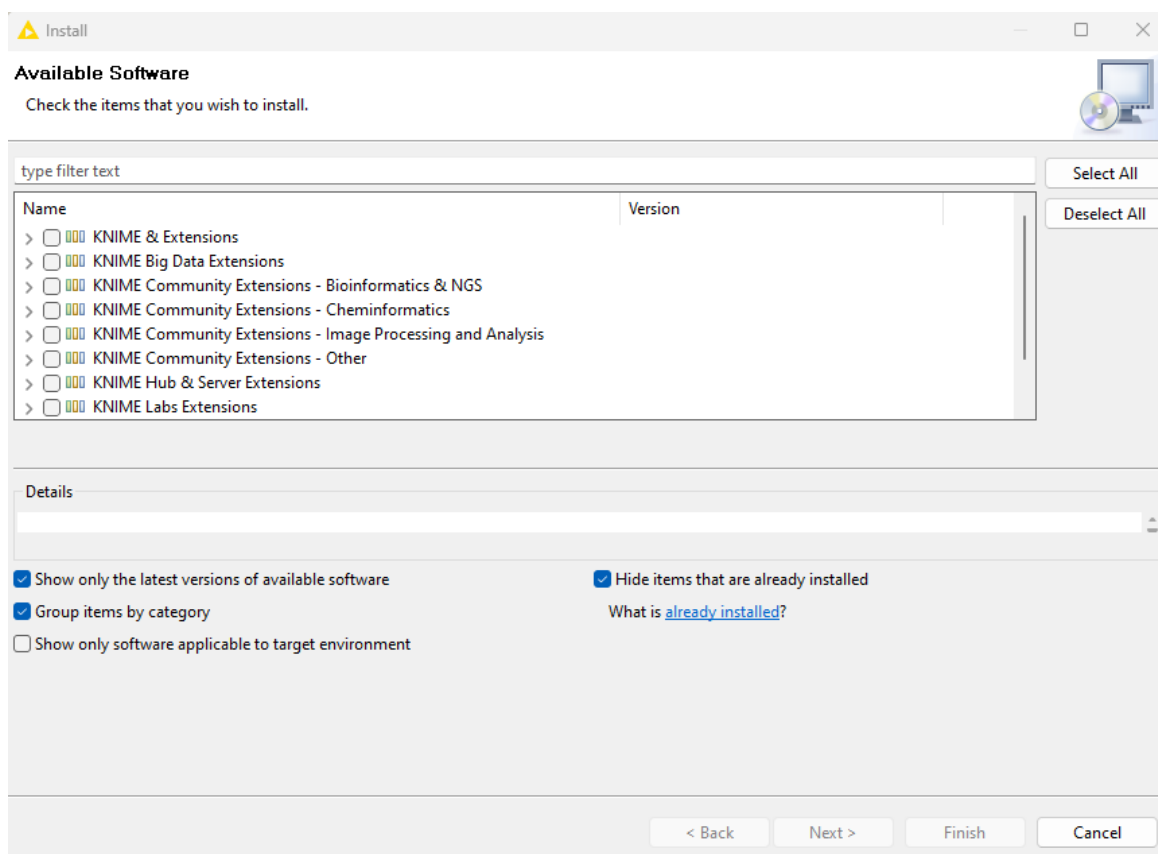

Figure 3. Installing Extensions and Integrations from KNIME Analytics Platform

- Select the extensions you want to install
- Click *Next* and follow the instructions
- Restart KNIME Analytics Platform.

The *Install Extensions* menu provides the extensions that are available via the **update sites** you have enabled.

To uninstall an extension, scroll to the bottom of the info page and click the *About KNIME* button, and then *Installation Details*. A dialog shown in **Figure 4** opens. Now, select the extension that you want to uninstall, and click *Uninstall...*

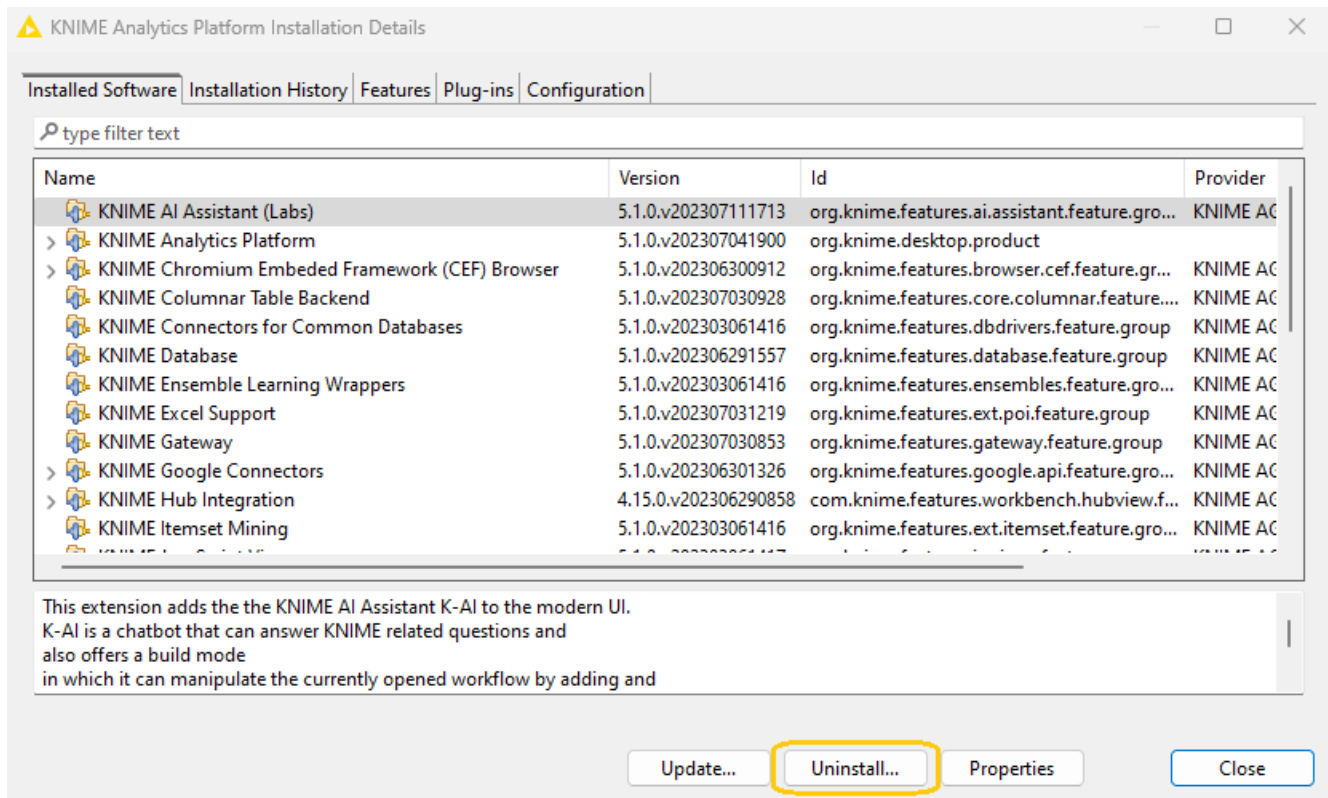

Figure 4. Uninstalling Extensions and Integrations

Updating KNIME Analytics Platform and Extensions

It is good to make sure that you always use the latest version of KNIME Analytics Platform and its extensions.

Do this by:

1. Clicking the info icon in the top right corner of the KNIME Analytics Platform to access the info page.
2. Scroll down to **Install Extensions** and click the *Check for updates* button. In the dialog that opens, select the available updates you want to install and then click *Next*.
3. Proceed by following the instructions. KNIME Analytics Platform has to be restarted in order to apply the updates.

Update Sites

The Update Sites are where KNIME retrieves additional software in the form of extensions as well as updates. To see or edit the available update sites, click the cog button in the top right corner of the Analytics Platform. It opens the *Preferences* dialog. Select *Install/Update* → *Available Software Sites*.

Default Update Sites

These four updates sites are provided by KNIME and are always available:

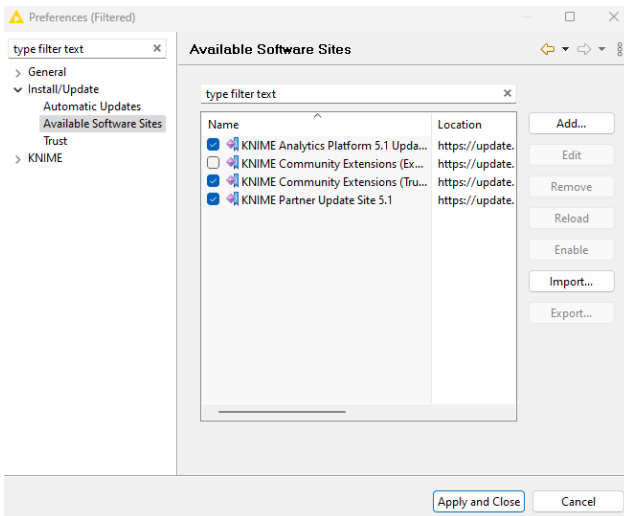

Figure 5. Available Update Sites

KNIME Analytics Platform 5.1 Update Site:

Provides all extensions and integrations maintained by KNIME: R, Python, H2O Machine Learning, Apache Spark for big data, and many more. Contains KNIME Labs Extensions, which are extensions that are not yet part of the set of stable KNIME extensions because their functionality may not yet be finalized.

Community Extensions (Experimental):

Provides additional extensions created by the KNIME community.

KNIME Community Extensions (Trusted):

Provides trusted community extensions, i.e. extensions created by the KNIME community, which have been tested for backward compatibility and compliance with KNIME quality standards.

KNIME Partner Update Site 5.1: Provides extensions created by KNIME partners.

KNIME Analytics Platform 5.1 Update Site and KNIME Community Extensions (Trusted) are

enabled by default.

Adding External Update Sites

To install extensions that are not part of the above update sites, click *Add* to manually add the relevant update site, inserting the Name and Location as shown in [Figure 6](#).

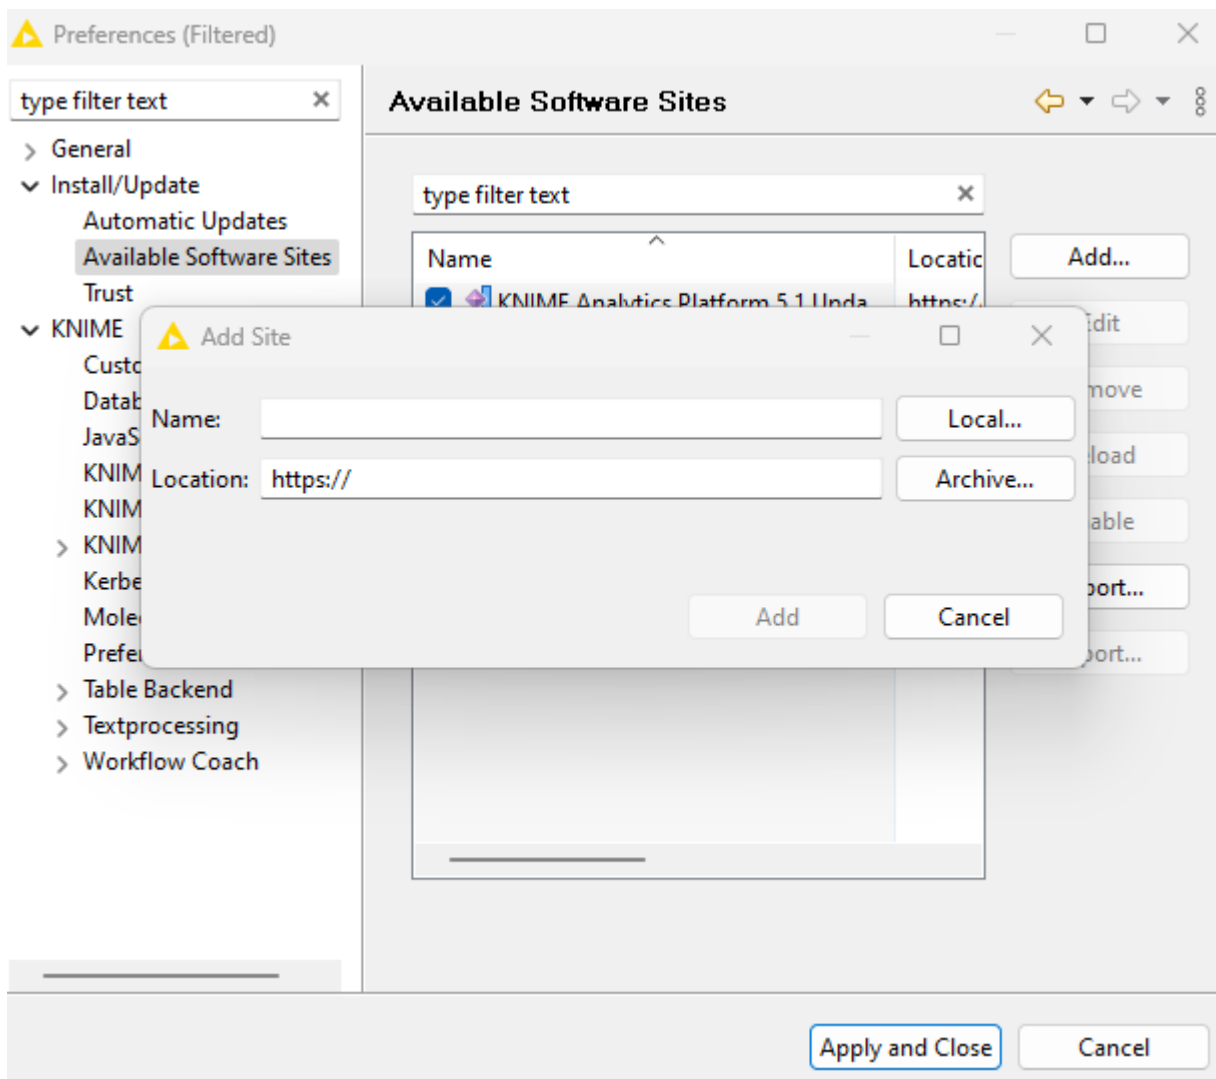

Figure 6. Add Update Sites

After adding a new update site you will see it listed in the *Available Software Sites*. You must now enable it by selecting it from the list.

Adding Local Update Sites

If your working environment has limited internet access or you receive an error message “Proxy Authentication Required” when connecting to a remote update site (provided by a URL), you can install extensions from a local zip file.

1. Download KNIME update sites as zip files at the following links:
 - [KNIME Analytics Platform Update Site](#)
 - [KNIME Community Extensions](#)
 - [KNIME Partner Update Site 5.1](#)
2. Save the zip file containing the extensions to your local system
3. Click the cog button in the top right corner to open the *Preferences* dialog. Select *Install/Update* → *Available Software Sites* and enter the path to the zip file by clicking *Add* → *Archive...* as shown in [Figure 7](#).

Figure 7. Adding Update Sites from Zip Archive

If the same extensions are provided by a URL, you will first have to disable the update site by disabling it in the list.

4. Now click *Apply and Close*

If the same extensions are also provided by a remote update site, you will first have to disable that update site by deselecting its entry in the *Available Software Sites* dialog and confirming via *Apply and Close*.

Working with the Nightly Builds

Once a night, a new version of KNIME Analytics Platform is created directly from our development branch. The Nightly Build versions available [here](#) provide insight into what's coming up in the next regular release. However, for real work, always use a version of a standard KNIME release. Also read the following disclaimer before proceeding:

Really, really, *really* important disclaimer

This is most definitely not production quality code. These nightly builds are what we use internally to validate and test recent developments, so they are not tested as thoroughly as standard KNIME releases. Furthermore new nodes or functionality may change substantially (or disappear entirely) from one build to the next. It's even possible that workflows you edit or create with nightly builds stop being readable by future (or past) versions...

These nightlies are a great way to get a sneak peek at what may be coming in the next version of KNIME and provide feedback and suggestions. They are not a particularly safe way to do real work.

Release notes and changelogs (KNIME Analytics Platform 5.1)

Release notes and detailed changelog for v5.1.x releases

KNIME Analytics Platform 5.1.0

Release date: July 19, 2023

Release notes

- Modern UI is the new default perspective for building and editing workflows for new KNIME workspaces. The old/classic user interface is still available and fully supported, reachable via the info page by clicking the info icon in the top right corner of the KNIME Analytics Platform.
- Upgrades from earlier versions, e.g. KNIME Analytics Platform 4.7.x are not possible. A fresh new installation is required. Shell scripts that assist with the upgrade are available for [Windows](#) and [Linux and macOS](#).
- The KNIME Labs Extension “KNIME Deeplearning4J Integration” has been marked as (legacy) and will be deprecated in a future version. Users are recommend to use other deep learning integrations such as Keras or Tensorflow.
- The KNIME Javascript views have received a (JavaScript) suffix to make them more distinguishable from the new views.
- The underlying Eclipse version has been updated from 2022-06 to 2023-03, incl. a number of library updates (e.g. Birt 4.9 → 4.13).
- The library to process Json documents has been updated to a the new namespace `jakarta.json` - 3rd party node extensions depending on it will need to be adjusted (currently causing compilation errors). Workflow users depending on the class names in, e.g. a Java Snippet node, might need to adjust their script (some fixing has been done but probably only fixes 80% of the use cases).
- The library to make REST requests (CXF) was updated to version 4.
- The option to select the asynchronous HTTP client implementation in REST client nodes was removed.
- Component execution is done slightly differently: A component’s “output node” will require all nodes within a component to be executed before execution succeeds. Equally, it will automatically be reset if any individual node is reset.

- The version of the underlying workflow storage format has been updated, causing all workflows to be completely re-saved when modified.
- Workflow Description: Title field has been deprecated (disambiguation between file names, workflow title and workflow name).
- XGBoost: Current limitation on Linux when passing numeric parameters (to be fixed in a bug fix release).
- Integrated Deployment: Workflows captured in loops require no “static” inputs, causing workflows to fail when collected in tables (hints at ill-designed workflows).
- All “(local)” views have been marked as legacy (replaced by modern visualization nodes).
- JFreeChart extension (local visualization) has been marked legacy and removed from the update site (still installable).
- “Headless” execution of workflows, e.g. on KNIME Server on Linux or via batch execution require an X Display (e.g. virtual framebuffer). For details see the [KNIME Server documentation](#).

Changelog (KNIME Analytics Platform 5.1.0)

New nodes

- UIEXT-470: Create ROC Curve node
- UIEXT-464: Create Parallel Coordinates Plot
- UIEXT-460: Create scatter plot matrix
- AP-20648: Data App Deployment Creator
- AP-20647: Service Deployment Creator
- AP-20593: Version Creator
- AP-20546: OAuth2 Authenticator (Password)
- AP-20545: OAuth2 Authenticator (Client Credentials)
- AP-20526: Box Authenticator
- AP-20425: Number Format Manager
- AP-20151: Box Connector
- AP-20065: Node List Extractor (extracts lists of nodes from current installation - part of testing extension)

- AP-20004: Cell Updater: Inject a new value for a single cell in a table
- AP-19950: Row Aggregator (simplification of GroupBy node)
- AP-19921: Table Splitter: according to a split criterion, define a row at which to split the table into top and bottom parts
- AP-19673: Data App Deployment Creator
- AP-19623: Table Updater: update values where row&column match
- AP-19621: Cell Extractor: extract the a single cell as table and flow variable
- AP-19620: Table Cropper: select a range of rows and columns to keep
- AP-18888: ZIP Archive Connector
- AP-18740: OAuth2 Authenticator
- AP-17353: String Replacer (Dictionary) node: Extended functionality and table input port for dictionary
- AP-13269: Value Lookup (supersedes "Cell Replacer" node with functionality similar to Excel's VLOOKUP)

Enhancements

- UIEXT-1039: Add '# Missing values' to Statistics View
- UIEXT-581: Indicate filtered items in TwinList
- UIEXT-533: Add unknown fields option to TwinList
- UIEXT-499: Fixed position for search and filter buttons
- UIEXT-402: Image generation for new visualisation nodes
- NXT-1836: Add dragged component from the hub to the workflow
- NXT-1835: Open dragged workflow from the hub
- NXT-1760: Display preferences button in application header
- NXT-1711: Switch between spaces in space explorer side panel
- NXT-1710: Edit workflow meta data
- NXT-1669: Display re-execution indicator for supported nodes
- NXT-1656: Replace node by dropping an existing node on another node
- NXT-1639: Port view with table spec and basic table statistic
- NXT-1634: Display unsaved changes for workflow tabs
- NXT-1632: Export workflow

- NXT-1587: Context menu inside the space explorer
- NXT-1572: Allow opened workflows to be deleted
- NXT-1499: Space explorer for local spaces and KNIME Hub Spaces
- NXT-1435: Display summary, issue and resolutions in error message tooltip
- NXT-1425: “Get started” page with workflow examples, local spaces, and hub spaces
- NXT-1402: Node repository based on the starter nodes or all nodes
- NXT-1369: Info page for “About”, “Install extensions“, “Perspective switch“, ...
- NXT-1279: Enable AP to be started by default with the “Modern UI” perspective for new workspaces
- NXT-1262: Search for compatible nodes inside the quick nodes adding panel
- NXT-481: Insert node on a connector by dropping it onto a connector
- NXT-238: Basic rich text workflow annotation
- NXT-104: Edit node label text
- BD-1215: (Big Data Extensions): Add support for native Databricks driver version $\geq 2.6.25$
- AP-20675: SMB Connector node: Update smbjs library to version 0.12.1
- AP-20599: HTML Cell Type: Hyperlinks and coloured text for views and Reporting (Labs)
- AP-20585: REST Web Service nodes: Remove option to use asynchronous HTTP client (misses functionality, has poor performance)
- AP-20580: (Python) Support Port type inheritance in Python nodes
- AP-20571: REST Web Service nodes: Add dynamic credentials input port
- AP-20538: DB framework with support for Kerberos constrained delegation for multi host databases
- AP-20537: Kerberos constrained delegation with support for multi host services
- AP-20536: DB nodes should not block a worker thread from the thread pool when waiting for the DB connection
- AP-20500: Update Apache CXF to 4.0.1 for supporting Jakarta namespace
- AP-20481: Switch from javax.json to jakarta.json
- AP-20402: Reporting (Labs): Generate reports from component views, similar to Data Apps, incl. multiple report utility nodes (e.g. PDF Writer)
- AP-20358: Update AWS Java SDK to version 2.20.42

- AP-20354: Improved handling of throttling in SharePoint Online nodes (Connector/Lists)
- AP-20340: Google Analytics Query node: Support for dimension filter expressions
- AP-20309: Twitter Streaming node: Deprecated due to Twitter's API policy
- AP-20295: Update Microsoft Graph SDK to version 4.59.0
- AP-20258: Add image output port type to Python node API
- AP-20245: (Python) Add ConnectionPortObject that enforces connected nodes to use the same Python process, so that they can reuse a connection/session
- AP-20242: (Python) Allow hiding advanced sections=ParameterGroups
- AP-20219: REST Web Service nodes: Add option "Fail on missing header value" (e.g. when credentials flow var does not have password)
- AP-20206: (Python) Add access to CredentialProvider from Python's ExecutionContext
- AP-20181: Workflow Reader node: Improve error message when reading a workflow that contains non-installed nodes
- AP-20105: KNIME Deeplearning 4J integration marked as "(legacy)" – see release notes for details
- AP-20092: Google Sheets Writer/Updater/Appender: Add "Write raw" setting in dialog
- AP-20086: Web UI for Unpivoting
- AP-20079: Add advanced setting "Update domains of all columns" to all WebUI nodes that change data ranges
- AP-20048: (Python) Support full column filter in Python extensions
- AP-20016: Node API with keywords – used in (fuzzy) node search, e.g. Excel Reader also matches "Microsoft" or "Spreadsheet"
- AP-20002: Update of underlying Eclipse version from 2022-06 to 2023-03
- AP-19990: Web UI for String to Number
- AP-19980: Web UI for Column Lagger
- AP-19979: Web UI for Reference Column Filter
- AP-19978: Web UI for Column Merger
- AP-19977: Web UI for Reference Row Filter
- AP-19976: Web UI for Table Transposer
- AP-19968: Web UI for Column Appender
- AP-19958: Call Workflow nodes: Enhance node description for default execution contexts

- AP-19914: Extension API: New API method to send 'rich' messages from NodeModel to UI (improved error and warning messages)
- AP-19882: Google Analytics nodes: Migrate from Reporting API to Data API
- AP-19860: Web UI for Column Renamer (dictionary) (was Insert Column Header)
- AP-19859: Web UI for Column Header Extractor node
- AP-19858: Web UI for Double to Int node
- AP-19857: Web UI for Number to String node
- AP-19856: Web UI for the Duplicate Row Filter node
- AP-19855: Web UI for Column Renamer
- AP-19854: Web UI for Column Filter node
- AP-19851: Web UI for String Replacer
- AP-19799: Container Input/Output nodes: Improve node descriptions
- AP-19703: Add support to Column Expressions node for KNIME Space file system
- AP-19698: Support multi-threaded reading of CSV files
- AP-19619: Call Workflow nodes: Support execution of workflows deployed on the KNIME Hub
- AP-19526: REST Web Service nodes: Add proxy configuration options
- AP-19504: Do not use packages from "anaconda" channel when using "Create new environment" on Python preference pages
- AP-19298: DB Connection Closer node: Dynamic input ports
- AP-19140: Python Node Extension: Support sharing environments
- AP-19132: Support PNG Cells in the Columnar Backend and Python
- AP-17204: Read Excel Sheet Names node: Support for XLSB files
- AP-16261: Support JSON cells in Columnar Backend and Python
- AP-15564: Implement ValueFactory for FileStoreCells and support XML cells in Columnar Backend and Python
- AP-14848: Microsoft Access Connector node: Support password protected files
- AP-12191: Automatic closing of idle database connections

Bug Fixes

- UIEXT-672: Current JS Views overlap other views in components

- AP-20541: Data loss when using save-as in a yellow-bar component editor
- AP-20461: Column Expressions node: Inconsistent results when using arrayReverse
- AP-20346: Decompress Files node: May fail on workflowset.meta files
- AP-20304: SSL certificate of standard server installations is not recognized any more by AP
- AP-20038: Repeated prompts for server password
- AP-20018: Node settings map entry order not preserved on copy & paste
- AP-19896: Call Workflow (Table Based) fails with the current mountpoint option in the Mountpoint Connector
- UIEXT-1055: Table header not aligned if scrollbar is present
- UIEXT-1037: Statistics view shows statistics rounded
- UIEXT-1008: Selection gets cleared when opening TableView with dialog
- UIEXT-773: Table view shows wrong row numbers when filtered
- UIEXT-741: Table view displays wrong result on fast filter changes
- UIEXT-740: Dialog doesn't open if settings are invalid
- UIEXT-669: Table View: column types aren't properly updated on column selection
- UIEXT-662: Clear filter does not update number of visible rows
- UIEXT-661: Filters in table not working correctly with activated lazy loading
- NXT-1728: Fix startup routine for existing workspaces
- NXT-1490: Configuration nodes can't be added in a component
- NXT-984: Zoom in shortcut not properly detected depending on keyboard layout
- AP-20683: Row to Column Header node: Duplicate row id when using the columnar backend
- AP-20680: Custom/KNIME URL file system ignores query parameters in mountpoint/workflow/space-relative URLs
- AP-20669: Column Rename node: Cannot cast each column to string when using the columnar backend
- AP-20661: Python nodes: Incompatible port type error is not user friendly
- AP-20654: Workflow Output node: Does not return data when executed and loaded from workflow written in AP 5.0.1 or earlier
- AP-20589: Tables created by RowContainer aren't tracked by local data repository
- AP-20570: Use LongUTFDataInput and Output when serializing DictEncodedDataCells in Columnar Backend

- AP-20560: Shared Component KNWF files are deleted when opened with AP
- AP-20501: (Python) Multiline node parameter descriptions do not dedent the description, instead the indentation formats the text as code
- AP-20472: (Python) Extension bundling scripts do not check for errors when downloading packages
- AP-20450: Kerberos constrained delegation should use domain_realm settings to determine target service realm
- AP-20430: Mountpoint Connector node: Hub/server executor cannot resolve file
- AP-20427: (Python) Exception messages causing failure to parse Pure Python extensions don't propagate to KNIME console
- AP-20395: Container Input (Repository Event) node: Errors due to incomplete feature installation
- AP-20390: Kerberos constrained delegation should not use account ID for for impersonation in KNIME Business Hub
- AP-20382: SAP Reader (Theobald) node: Ignores lines that start with #
- AP-20305: Call Workflow nodes: Support hub space paths when setting the callee via flow variable
- AP-20227: Nominal Row Filter Configuration node: Configuration is occasionally not accepted in dialog
- AP-20214: Some nodes with Web UI throw an NPE if a table without columns is connected
- AP-20195: SSH Connector node: Deadlock when multiple nodes read from the file system
- AP-20185: Configuration (NodeSettings) underneath NameFilterConfiguration might load as null
- AP-20135: Component update fails silently if an UnsupportedWorkflowVersionException occurs
- AP-20114: File Upload Widget does not work on KNIME Hub
- AP-20073: Call workflow nodes fail if job takes longer than 1 minute to load on hub
- AP-20061: Table Reader node: Support hub space paths when setting the file via flow variable
- AP-20049: Call Workflow (Row Based): Does not delete auxiliary jobs on server if discard successful jobs is false
- AP-20006: Loading node repository may run into race condition (ExceptionInInitializerError)

- AP-19993: Arm64 Mac build (M1) is missing in '-Xmx' memory parameter in knime.ini
- AP-19953: Call Workflow nodes: Hub execution not supported without connector node when the workflow is running on the Hub itself
- AP-19895: Call Workflow (Table Based) relative to option changes after the workflow is reopened
- AP-19874: Component updates: No proper error message popup when checking for updates fails
- AP-19863: Birt Reporting: "Web Viewer" option not displaying properly
- AP-19800: Call Workflow nodes: NoSuchFileException in the callee path when executing workflows on the Hub from the KNIME Explorer
- AP-19792: Call Workflow Service node: Cannot be used in hub yellow bar editor
- AP-19751: Create Version Node does not check if the upstream space connector is setting a version
- AP-19634: File handling connector nodes do not support workflow credentials
- AP-19533: Semantic Web nodes do not support proxy settings
- AP-19418: SharePoint Online Connector node: Fails when working directory is controlled via flow variable that does not start with "/"
- AP-18808: Remove bundled Athena driver
- AP-18770: Fix at setting in a extended dataframe containing lists and sets
- AP-18708: Azure Data Lake Storage Gen2 Connector is failing to process proxy bypass list
- AP-18025: Percentage cell renderer uses comma as decimal separator

Nodes changing in KNIME Analytics Platform 5.1.0

New Nodes:

- OAuth2 Authenticator (Password)
- OAuth2 Authenticator (Client Credentials)
- OAuth2 Authenticator
- Box Authenticator
- Box Connector
- Molecule Widget (Labs)
- Google Analytics Connector (GA4)

- Google Analytics Query (GA4)
- Report PDF Writer (Labs)
- Report HTML Writer (Labs)
- Report Concatenate (Ports) (Labs)
- Report Concatenate (Table) (Labs)
- Text View (Labs)
- Container Input (Repository Event)
- Version Creator
- Service Deployment Creator
- Data App Deployment Creator
- Number Format Manager
- Row Aggregator
- String Replacer (Dictionary)
- Value Lookup
- Cell Extractor
- Table Cropper
- Table Splitter
- Table Updater
- Cell Updater
- Scatter Plot Matrix
- Parallel Coordinates Plot
- Sunburst Chart
- ROC Curve

Nodes replaced, old nodes deprecated:

- Service Deployment Creator (deprecated)
- Space Version Creator (deprecated)
- Column Rename (deprecated)
- String Replace (Dictionary) (deprecated)
- Cell Replacer (deprecated)
- Twitter Streaming (deprecated)

- Color Appender (deprecated)

Nodes declared legacy:

- JFreeChart (multiple nodes)
- DeepLearning4J (multiple nodes)
- Run R Model in Microsoft SQL Server (multiple nodes)
- Interactive Table (legacy)
- Interactive Histogram (legacy)
- Histogram (legacy)
- Box Plot (legacy)
- Line Plot (legacy)
- Parallel Coordinates (legacy)
- Scatter Plot (legacy)
- Scatter Matrix (legacy)
- Pie chart (legacy)
- Interactive Pie chart (legacy)
- Conditional Box Plot (legacy)
- Lift Chart (legacy)
- HiLite Table (legacy)

Nodes renamed:

- ROC Curve (local) → ROC Curve (legacy)
- Enrichment Plotter (local) → Enrichment Plotter (legacy)
- Crosstab (local) → Crosstab (legacy)
- Variable to Credentials → Variable To Credentials
- Variable to Table Column → Variable To Table Column
- Variable to Table Row → Variable To Table Row
- Table Row to Variable → Table Row To Variable
- Table Column to Variable → Table Column To Variable
- Microsoft Authentication → Microsoft Authenticator
- Amazon Authentication → Amazon Authenticator

- Google Sheets Connection → Google Sheets Connector
- Statistics (Labs) → Statistics
- Line Plot (Labs) → Line Plot
- Box Plot (Labs) → Box Plot
- Scatter Plot (Labs) → Scatter Plot
- Histogram (Labs) → Histogram
- Heatmap (Labs) → Heatmap
- Pie Chart (Labs) → Pie Chart
- Density Plot (Labs) → Density Plot
- Stacked Area Chart (Labs) → Stacked Area Chart
- Bar Chart (Labs) → Bar Chart
- Table View (Labs) → Table View
- Double To Int → Double To Integer
- Extract Column Header → Column Name Extractor
- Insert Column Header → Column Renamer (Dictionary)
- Pivoting → Pivot
- Unpivoting → Unpivot
- Top k Selector → Top k Row Filter
- Transpose → Table Transposer
- Row to Column Header → Row to Column Names
- Google Authentication (API Key) → Google Authenticator (API Key)

Community Extensions

Trusted Partner Extensions

One change currently:

Extension	Contributor	Changes
Symanto Brain	Symanto	Available - New since 2023, also available for 4.7
Metadata-Hub Extension	GRAU DATA	Available - New since 2023, also available for 4.7
Spotfire File Nodes	TIBCO Spotfire	Available soon

Trusted Community / Open Source Extensions

Extension	Status
Generic Workflow Nodes for KNIME	Available

Extension	Status
KNIME Groovy Scripting extension	Available
KNIME HCS Tools	Available
KNIME Python Scripting extension	Available
KNIME R Scripting extension	Available
KNIME Shapefile Support	Available
Lhasa	Available
OpenMS	Available
RDKit Nodes Feature	Available - Changes - 5.1.0 did not work on Linux due to a regression of KNIME Analytics Platform (fixed in 5.1.1)
Slack Integration	Available
Continental Nodes for KNIME	Available
Genentech	Available
Geospatial Analytics Extension	Available - Changes
Neo4J	Available
Vernalis KNIME Nodes	Available - 5.1.0 did partially not work on Linux due to a regression of KNIME Analytics Platform (fixed in 5.1.1)
KNIME Image Processing	Available
KNIME-CDK	Available
KNIME AI Extension	Available - New since 2023
Web Interaction	Available - New since 2023
KNIME Nodes for Scikit-Learn (sklearn) Algorithms	Available - New since 2023
DYMATRIX	Not available anymore

Experimental Open Source Extensions / Experimental Community Extensions

Extension	Changes
AF Utility Nodes	Available
CIR KNIME Integration	Available
KNIME Matlab Scripting extension	Available
Process Mining Extension	Available
Apprise Nodes	Available
PIA	Available
Erlwood KNIME Open Source	Available
Word2Vec	Available - New since 2023
Indigo KNIME integration	Available - Not working on MacOS because of a bug in Indigo
AI.Associates Signal Processing	Available
Enalos Nodes for KNIME	Available
MMI Data Analytics Nodes	Available
PM4KNIME	Available
Redfield BERT Nodes	Available
Redfield NLP Nodes	Available
3D-e-Chem KNIME nodes	Available soon
FSK-Lab	Available soon
KNIME Spatial Processing Nodes	Available soon
de.NBI - CIBI Extension	Not available anymore
JMSConnector for KNIME	Not available anymore
OCHEM Integration Nodes	Not available anymore

Extension	Changes
openBIS Knime Nodes	Not available anymore
RapidMiner Integration for KNIME	Not available anymore
Self-Tuning Association Rules for KNIME	Not available anymore
HTS Data Mining	Not available anymore
KNIME Portable Format for Analytics (PFA) Support	Not available anymore
CheS-Mapper-Node extension for KNIME Workbench	Not available anymore
Cumulocity Connector	Not available anymore
TreeSHAP - Explainable Machine Learning in KNIME	Not available anymore
SeqAn	Not available anymore

KNIME Analytics Platform 5.1.1

Release date: September 14, 2023

Enhancements

- BD-1239: (Big Data Extensions): Spark 3.4 support
- AP-19146: Python Node Extension: Support dialog rules
- BD-1243: (Big Data Extensions): Support insert/update/delete SQL statements in Databricks and Hive JDBC connections
- NXT-1934: Drag and drop an extension

Bug Fixes

- AP-20968: REST DELETE node uses 'Content-Type: text/xml' request header if none was set

- AP-20843: Component Execution: Unclosed loops can be executed in 4.7 but no longer in 5.1 (requires switch to enable backward compatibility)
- AP-20810: Corrupt workflowset.meta Prevents Workflow Loading
- AP-20754: Updating to latest 4.7 AP is not possible (due to 5.1 Download banner)
- AP-20749: Apache CXF's HttpClient-SelectorManager threads run indefinitely
- AP-20744: BigGroupByTable fails to group "unusual" cell types
- AP-20730: SharepointOnline Connector cannot read/write to folders which contain spaces in the path
- AP-20583: XGBoost Libs no longer working in KNIME 5.1.0 Nightly/Linux (after Eclipse Update?)
- AP-20949: REST Web Service nodes: KNIME-wide settings do not apply without reopening the dialog
- AP-20900: Using HTTP/2 for Workflow Download Fails on MinIO (KBH/DatA-Hub)
- AP-20794: No node recommendations for python nodes
- AP-20719: Columnar Backend: ClassCastException with XMLCells in loops
- AP-20712: KNIME Server Connector: Typo in error message for unknown host
- AP-17672: Kafka Consumer cannot handle null keys
- NXT-1929: Nodes followed by a component at the beginning of a workflow are not executable in Modern UI
- NXT-1800: HTML is displayed in modern workflow annotation inside the classic user interface
- UIEXT-1072: Resources passed through CEF middleware get corrupted

KNIME Analytics Platform 5.1.2

Release date: October 18, 2023

Enhancements

- AP-21235: Check configuration of deployment when version is changed
- AP-21050: String Replacer (Dictionary) with new default with regard to iterative application of replacement rules
- AP-21019: Support pagination in AP Explorer

- AP-20893: Snowflake driver updated to version 3.14.1
- NXT-2071: Update to CEF 106.0.19

Bug Fixes

- AP-21065: Adding file system input port removes outgoing connections to metanodes
- AP-21046: AP: can't delete multiple jobs in one go
- AP-20799: Shared Component in not-shared Component not updated
- AP-21245: Content Retriever node fails to retrieve full Page content
- AP-21244: REST Client nodes do not properly load proxy settings w/ auth
- AP-21049: Salesforce client nodes not properly closing "web client" instance (thread exhaustion after millions of requests)
- AP-21038: Snowflake DB Loader fails in KNIME Executor if local file access is disabled
- AP-21036: Memory alert while reading into SharedReadBatchCache causes deadlock
- AP-20984: Failing Python node kills PythonConnectionPortObject even if the node did not create the connection
- NXT-2080: Saving workflow calls "saveInternals" twice after moving a node
- NXT-2072: Too many threads "comm-pool-thread-1" getting generated (but not discarded) when generating images in a loop
- NXT-2037: Overwriting a local folder with a workflow from Hub
- NXT-2036: D&D data files from Hub space to workflows in Modern UI does not add true path
- NXT-1927: Execute button is above the table

Known issues

- AP-21237: Splash screen is displayed upside down

When starting the application in macOS Sonoma (version 14) the splash screen is displayed upside down. This was introduced via a macOS background image rendering bug which affects all Eclipse-based RCP apps.

KNIME Analytics Platform 5.1.3

Release date: February 23, 2024

Enhancements

- AP-21786: Use URLConnection instead of HttpClient for REST requests (improves stability for concurrent requests)
- AP-21605: Support `"org.apache.cxf.transport.http.forceURLConnection"` system property to avoid CXF thread exhaustion
- AP-21579: Add configuration option for 'receiveTimeout' in Salesforce Query nodes
- AP-21415: Add CID to mail attachments in Send Email node
- AP-20946: Robustify server address input validation in `AdditionalInformationPanel`s
- NXT-2160: Update to Equo Chromium 106.0.21

Bug Fixes

- AP-20588: Sorter node does not handle missing flow variable for alphaNumStringComp (kudos to @richards99 for reporting [1](#))
- AP-21398: Row Aggregator miscalculates weighted average (wrong formula) (kudos to @Bytecrawler for reporting [1](#))
- AP-21237: macOS Sonoma: Splash screen is displayed upside down (kudos to @mlauber71 for reporting [1](#))
- BD-1251: (Big Data Extensions): DB Loader with file system connection fails with `"Config for key filter_mode not found"` exception (kudos to @mlauber71 for reporting [1](#))
- AP-22004: DB Loader fails for Snowflake if the KNIME workspace is located on a shared drive on Windows
- AP-21539: Metanode to Component conversion fails under special circumstances
- AP-21081: File Download Widget creates an empty file if the file name has a 'space' character in it
- AP-21059: Decision Tree View (JavaScript): encoding issues on Windows
- AP-21735: Missing node message duplicated for each missing node
- AP-21617: Excessive thread creation when loading many jobs
- AP-21561: Update pyarrow in knime-python-base=5.1 to 14.0.1 to prevent CVE-2023-

47248

- AP-21446: Send to Tableau Server node opens up large amounts of ports and does not close them on Windows Server
- AP-21445: Agent Prompter fails on Azure OpenAI with KeyError
- AP-21393: Predictor nodes don't keep original row IDs
- AP-21375: GPT4All .gguf models do not work
- AP-21371: Missing description in Azure Authenticator
- AP-21366: Vector Store Retriever fails if the query table has multiple columns
- AP-21252: xlink:href attributes in HTML coming from WebpageRetriever cause errors in XML parser
- AP-21223: Default off-heap memory size strategy often exceeds available RAM when combined with Xmx
- AP-20299: Duration in Table View (classic & modern) sorted like strings
- NXT-2130: Stopping a loop execution takes (much) longer in the new UI than in the old UI
