KNIME Business Hub version 1.15

Istio upgrade

Istio has been upgraded to version 1.24.2.

Before upgrading, you need to add the domain `gcr.io` to the whitelisted domains, since the `istio` image is now hosted on `gcr.io`. This is a change from previous versions of `istio`, which were hosted on `docker.io`. The change was made due to Docker's increased rate limits on image pulls.

- For installations that have manually installed `istio` it is highly recommended to update `istio` to the same version. Instructions are available here.

- For installations that install `istio` via KOTS, no other input is required. The upgrade will be automatic.

This upgrade will be mandatory in future releases when features only found in `istio` 1.24 are in use.
